

Stravilink WallBatten^{*} Datasheet

BENEFITS

- Cost-effective
- Quick and easy to install
- Standard thicknesses are 56 mm and 96 mm
- Other thicknesses available to order
- A resilient strip should be installed to support the base of the wall and to decouple the perimeter of the wall
- To specify which Stravilink WallBatten wall batten you require CDM Stravitec's engineers will need the following information:

The required performance level - this will determine the type of Stravilink WallBatten

The height and weight of the supported wall - this will determine the supply of the base isolation strip

Details of any items supported off the walls - such as televisions etc.

The supporting wall - for us to recommend which fixings would be best to use

*Previously known as CDM-WALL-T

TYPICAL ASSEMBLIES

1. Wall
2. Plasterboard, gypsum board or dry lining with optional damping layer
3. Stravilink WallBatten
4. Absorption layer
